

## **Period 3: Lessons Learned**

**Weleetka #18-0316**

### **Experience Gained**

Many things were learned at bot ball and other events. We've learned that the structure of the bot can be key to a great shot for the coders. We have also learned to work as a team and to encourage each other. More importantly we have learned that time is precious. We have paid the price for goofing off.

### **Documentation Process**

Working on documentation really helped with keeping on track and keeping our minds sharp. It also helped with our thinking process, which is valuable.

### **Surprises**

We were definitely surprised with the building process and coding process, it was shocking what a team working together and communicating can achieve. It is also surprising that some of the more simple things can go a long way and can do successful things.

### **Advice for Future Teams**

Work together! Be a team. You can accomplish a bunch more with teamwork. Give the ideas that come to your head. Work hard and try your best. Most importantly don't get frustrated if you've made a mistake, it could always be fixed.
